

# COASTAL AND INLAND VESSEL

Coastal and inland vessels serve the important task of connecting goods to remote and interior parts of a country which are otherwise unreachable for the large ocean carriers. They are an efficient and cost effective mode of transport which contribute to reducing the overall cost as well as carbon footprints of the value chain of transport. Maintaining quality and health of coastal and inland vessels is, therefore, of vital significance to most countries around the world. We, at IRClass, ensure that your fleet is up to standard throughout its life cycle so as to service you optimally for long periods.

Coastal and Inland vessels need application of Rules specially carved to the practical requirements of these carriers which are built over years of experience together with trade considerations. IRClass Rules for Inland Waterways and Coastal Ships are an outcome of a combination of both and are applied through our experienced surveyors who assist you in understanding and applying them.

IRCLASS undertakes the classification of inland and coastal vessels, including dredgers, ferries, tugs, cargo vessels and other utility crafts operating in the rivers, estuaries and along the coast. Apart from freight sector, IRCLASS provides services to tourism, defense, dredging and other infrastructure sectors. To assist our clients, IRCLASS has an Indian network of 20 offices covering the entire coastline.

#### **New Construction at Shipyards**
